

iSolved | Mobile

Now that more employees are working remote and on-the-go, employers are seeking solutions to accurately track their mobile employees. But beyond ensuring correct pay for time worked, labor laws have increased the pressure on accuracy of all employee time records. In addition to an increasing number of labor grievances, **FLSA, FMLA, and of course the Affordable Care Act are just a few regulations that demand precise labor records – even for your mobile employees.**

Plus, employers are looking to drive improved engagement and mobile platforms help achieve that goal. Employees have more access to the information they need, when they need it, without interrupting HR. **Features such as Remember Previous Selections make the iSolved Mobile app very quick to learn and use.** It saves HR and payroll time, improves data accuracy, and takes the guesswork out of mobile time sheets.

iSolved Mobile features include:

Mobile Punch

Your time clock in a pocket. Employees can quickly punch in and out for work as well as for meals and breaks. Schedule and meal restrictions can also be enforced based on your company's policies.

Department and Job

Employees can now drill down three levels in the Department and Job hierarchy right through the Mobile app. This enables employers to allocate labor to departments and sub-departments.

Group Punch

Via a single transaction, your supervisors can create punches for members of a work crew.

View Schedules

Employees can easily view their schedules right from the app. It will display your allowed punch times (shift start and stop times, plus shift policy) for the next 14 days.

Full Offline Operation

iSolved Mobile allows users to log in and create a punch while offline. Punches will be automatically transmitted to iSolved once a signal becomes available.

Centralized Application Configuration

All of iSolved Mobile's configuration settings are defined within iSolved (or iSolved TimeForce) and pushed to the mobile device. You retain centralized control over how the application is configured on your employee's phone.

Time Clock Mode

Using their supervisor's phone, employees can punch just by entering in their badge number.

GPS Location

If available, the GPS coordinates of the phone are captured and attached to the punch. You can then view the location of the punch from within iSolved TimeForce using Google Maps.

COMING SOON!

More features will be arriving soon to iSolved Mobile, including the ability to view current and past paycheck stubs
(will require iSolved HCM).

Device OS Support:

Apple iOS 7.0+
Android KitKat (V4.4.0)+
